Coin Finds

‘W’ Quarters Galore

I found my second “W” quarter in the same place I found the first one back in September 2019; emptying the quarters from one of the pool tables at work. It is another Lowell design, but in much nicer condition that the first one I found. It would probably grade about MS-63 due to a couple of heavy bag marks on the obverse.

Daryl Conley
Truth or Consequences, New Mexico

When paying for purchases with my debit card, I always get $3.00 cash back in quarters to search for 2019-W Washington Quarters. While paying for my groceries recently using my debit card, I got $3.00 cash back in quarters, which were 2019 Lowell Park. After getting home and going through them, to my surprise out of the 12 quarters, two had the 2019-W mint mark. On another occasion I received a 2019-W San Antonio Mission quarter. This is a great way to search for 2019 “W” mint mark quarters without going to the bank.

Ken Copeland
Chesapeake, Va.

These finds are different from your usual reported ones. When I was 12 years old (in 1957), my dad would let me stop at any bank that we passed on vacation trips. I’d ask tellers to see their silver dollars and they’d usually pull out one or two. My father would buy any dates and mints at face value for ones I needed. I stored these in Wayte Raymond boards. On one trip to see an aunt in N.J., I visited her bank and asked my usual question. The teller asked how many I wanted. Excitedly I asked how many he had - 5,000 was his reply. This was before credit cards, and my father would take only $150 in cash on vacation. The teller let my father buy $50 at a time and return what I did not want. I looked at these recently for the first time in years. To sum up, at that bank I acquired 99 different dates and mints spread across Morgan and Peace dollars, no Seated Liberties. Condition was mostly VF to AU. There were no great rarities or CC’s that came out in 1962 in the Treasury hoard. Two better ones in VF were 1893-CC and 1895-O. I also kept a dozen proof-like 1878-S dollars; of course, these had the usual bag marks.

Nearly all my collection of cents through halves came at face value from daily finds pulled out of my mother’s “milk and cracker” change from her elementary school, approximately $50 each week, that I rolled for her. From this weekly search, I found a complete set of Buffalo nickels, which were as common as Jeffersons. I did find one 1950-D nickel in VF, a surprising circulation encounter. I never did get a 1916-D dime, but I did find a VF 1942 overdate. Roosevelts were too ordinary to save. I found loads of Standing Liberty quarters without dates but a complete date and mint set starting in 1925, three VG Washington 1932-S and one VG 1932-D quarter, a pair of AU 1932-S and 1932-D quarters, and all Walking Liberty and Franklin halves. I uncovered no Lincoln keys. As a curiosity, I saved all steel cents, accumulating a couple thousand in a blackened state, which my father used as poker chips. The few Indians cents and Barber coins were mostly worn; an exception was a VF 1896-S half dollar, saved for me by my school lunch cashier. My last additions were the circulation finds ending with silver coins found until about 1970.

So, what to do with all this? My grandson and granddaughter, ages nine and six, are the only ones in the extended family with an interest in collecting coins. Regularly, we sit and search rolls so they can fill their state quarter albums. I also drop a bunch of the above on the table for them to keep. One aside, I showed my grandson my contemporary arithmetic book from elementary school, illustrated with Lincoln wheat backs, Buffalo nickels, Mercury dimes and Standing Liberty quarters. He was pleased to see that children his own age had also known about these coins.

Edward Cohen
Address Withheld

I usually look through bank-wrapped boxes of half dollars. Usually, I find one silver Benjamin or Kennedy half per box with an “s” mint mark, or a 1965-70 Kennedy half. I was amazed to find eight coins in one box. How lucky! Then, I found four more in another box. I hope my luck continues because this is fun.

Geoff Gersuck
San Bernadino, Calif.

I had two interesting finds. In change at a local bookstore, I received a 1963-D silver quarter! A day later, in change at a restaurant, I received a 1942 wheat penny! I look at every single coin I get everyday. It’s fun and, as the above shows, productive.

Steve Barnes
Fishers, Ind.

I had a fun Christmas Eve in 2019 when I received a coin in the change dispenser at Walmart. I thought “Wow, that looks like a war nickel.” Upon closer inspection, it turned out to be a 1942-D Jefferson nickel in Fine condition. Imagine that!

Michael F. Stake
Woodward, Okla.

Basics and Beyond

Collecting Coin-Related Items

When it gets close to Christmas, my wife and I begin keeping our eyes open for "stocking stuffers." These are inexpensive gifts to stuff into our son and grandson's stockings and into our spouses' as well. This year, we spotted one such gift as soon as we entered Trader Joe's in New Orleans, a sack of milk chocolate "coins." In addition to getting a sack for our son, my wife also purchased one to put in my stocking.

Over the years, I've acquired a variety of what I would call "coin-related" gifts. They're not coins and in fact have little value beyond their appearance, which is coin-like.

To illustrate, my sack of "coins" contains a variety of chocolates covered in gold foil that have the appearance of real coins. The U.S. "coins" seem to be mostly Washington quarters, all with medal alignment. If you turn such a piece along its vertical axis, the obverse and the reverse will have the same orientation. U.S. coins, unless they are errors, have coin alignment. That is, if you want the obverse and reverse to have the same orientation, you need to rotate the coin around its horizontal axis. From my experience, non-collectors invariably turn the coin the wrong way to find the reverse inverted relative to the obverse.

There are also a variety of foreign "coins." One of these has the same design on both sides. I should eat that one!

In addition, I have one chocolate coin with a J.F.K design but no date. Also, the coin appears to have been struck slightly off-center, and it has neither medal nor coin alignment. The reverse detail is poor.

One of my favorite pieces is a coin coaster, with the obverse design of a Peace dollar. It's very well struck and dated 1922. On the back of the coaster, there are a couple of stickers. One says that it's made by Lifo Industries (last in, first out?) and is one of its "Wild Coasters." Another sentence says "Lifo creations are handmade from resin by our expert craftsmen."

I have two large tins made to resemble Buffalo nickels. Their diameters are 4.5 in., and they are 1.25 in. thick. The date is 1938 and there's no mintmark, which is impossible as all 1938 Buffaloes were minted in Denver. I would tell you what's inside but they're rusted shut.

I have a large chocolate coin that imitates a J.F.K half dollar. The diameter is about 4 in. and the date is 1969, which means that it's made of 40 percent silver. Oh, wait, it's made of milk chocolate. As usual, it has medal alignment.

One of my many chocolate Buffalo nickels is a rarity: a 1913-S on the plain (Type 2). This is the big key to the Buffalo nickel series. Although many of this date were poorly struck, this one is a gem. As you would expect, it has medal alignment.

I have six large metal "coins," four of which are key dates. The oldest of these 3-in. diameter coins is an 1856 Flying Eagle cent. As you probably know, real 1856 FE cents had a small mintage, on the order of 2,000 pieces. Even in the lowest grade, the 1856 Flying Eagle is worth at least a few thousand dollars. Mine has medal alignment, of course.

Also with a medal alignment, I have an 1877 Indian Head cent, the big key to the series. It has a fantastic strike.

Next, comes a replica of a coin that I wouldn't consider a keeper if I found it in circulation. It's a Bicentennial Washington quarter. As usual, it has medal alignment.

Another copy of a coin that's relatively common is a 1918-D Buffalo nickel. I thought maybe it's supposed to be a 1918/17-D, but there's no hint that the "8" is over a "7." Interestingly, it has coin alignment.

The next one of these replicas is a 1916-D Mercury dime. It also has a coin alignment and full split bands on the reverse. If it were real, it would easily command five figures at auction.

Finally, there's a 1916 Standing Liberty quarter with coin alignment and an incredibly sharp strike. With a mintage of just 52,000 pieces, the real 1916 S-L quarter is worth around $1,000, even if it doesn't have a date!

Somewhere, I picked up three metal ashtrays that look like coins. There's a 1908 Indian Head cent, one with the reverse of a Buffalo nickel, and a 1916 Mercury dime. These are uniface "coins," so I can't tell you anything more about them, or the coins they're supposed to represent. I don't know what I would do with them, as I smoked my last cigarette on Feb. 1, 1964.

As you can see from what I've written, Buffalo nickels are popular with the designers of these fake coins. One of my most interesting "coins" is a 1913 Buffalo nickel made of white soap. The date is 1913, and the reverse, with medal alignment, is of a Type 2 coin. It's in a round soap dish (or ashtray), which reads around the rim: THE FIRST BUFFALO NICKEL 1913. Of course, it could be argued that it's not the first Buffalo nickel, as it's a Type 2 coin, with the buffalo on the plain.

One of my favorite coin-related objects is a uniface Buffalo nickel clock. Unfortunately, the face that shows is the reverse. As a result, I can't tell you the date. Also, I can't tell you the time either, as the clock quit many years ago.

The final piece I'll describe is a plastic tray with 15 foreign coins imbedded in it. The coins are all made of base metal and thus have no intrinsic value. They don't have much face value either. There are a couple of British coins, one from Norway, an oddly-shaped coin from India, one from Sierra Leone, and a small coin from Cyprus with a stylized fish on it. I'm sure my wife insisted I buy it to add to my collection of coin-related objects.

Keep your eyes open when you go shopping with your spouse. You may find that collecting coin-related items is both fun and inexpensive.

First Spouse Coins: Bargain-Priced?

By Mike Thorne, Ph.D.

Abigail Adams and John Adams wrote each other letters often while he was away. In one of her most memorable letters, Abigail wrote "remember the ladies," when John Adams was creating the framework for the new Republic.

I WAS TALKING to a friend at a New Year's Day brunch, when the topic of coins came up. As you would expect, virtually everyone knows that I'm a "coin person." Anyway, my friend reminded me that several years ago I had told him that North Carolina quarters taken from circulation would never be worth more than face value. As over a billion were minted, I feel sure they're still worth only a quarter each.

Apparently, he was undeterred from saving them and now has quite a few. From this, the conversation drifted into the presidential dollar series, which he seemed to be only dimly aware of. I then mentioned an issue that he had never heard of: the First Spouse series.

Now, these are definitely worth more than their $10 face value, as they contain half an ounce of 24-karat gold. Issued to correspond to the Presidential dollar series, the First Spouse series was produced from 2007 to 2016 at the West Point Mint (W). For each coin, there's both a circulation-strike piece and a proof issue. With one exception (Jefferson's Liberty), the proofs had larger mintages than their circulation counterparts.

The obverse on all but five of the First Spouse coins (more on this later) shows an image of the president's spouse. According to a citation in Dennis Tucker's *American Gold and Silver*, the reverse depicts ". . . images emblematic of the life and work of the First Spouse whose image is borne on the obverse. . . ."

For four of the five presidents who did not have a wife during their terms in office, the First Spouse series contains a coin whose obverse features a version of Liberty that was on coins issued during the president's term. This was the case for Thomas Jefferson, Andrew Jackson, Martin Van Buren, and James Buchanan. These four coins form a set within a set, and this Liberty set is quite popular with collectors.

The reverse of the "Liberty" coins has a design representative of some aspect of the man on the obverse. On Andrew Jackson's Liberty, for example, the reverse shows Jackson in military uniform on horseback, with the name (Old Hickory) in the field behind him. This was what he was often called after his service in the War of 1812.

One reason for the popularity of the Liberty set is that the four images are all different ones from the 19th century, which many collectors undoubtedly see as the golden era of U.S. coin designs. For Thomas Jefferson, the image was taken from the Draped Bust half cent (1800-1808), designed by Robert Scot. U.S. Mint Engraver John Reich designed the Capped Bust, Lettered Edge half dollar (1807-1836) from which the Liberty was taken for Andrew Jackson's coin. Famed U.S. Mint Engraver Christian Gobrecht designed the Liberty Seated dime (1837-1891), and its version of Liberty was used on the coins for Martin Van Buren. Finally, Gobrecht's obverse design for the Liberty Head quarter eagle (1840-1907) was chosen for James Buchanan's Liberty. If you're not familiar with these designs of Liberty or haven't looked at them in a long while, check them out, and I think you'll see why these four coins (eight if you consider both of the production methods) are a popular subset to collect.

You'll note that I wrote that four of the five unmarried presidents have versions of Liberty substituting for a spouse's image. Chester A. Arthur was the fifth president unmarried during his time in office, his wife having died shortly before he took office as vice president. Arthur succeeded President James Garfield after the latter's assassination.

As such, his coin has an obverse design featuring the image of Alice Paul, a leader in the movement to gain the vote for

ALICE PAUL

VOTES FOR WOMEN

In the case of Chester Arthur, Alice Paul features on this coin, a leader in the suffrage movement who helped women gain the right to vote.

Ellen Wilson supported several causes including the need for child labor laws and education projects in Appalachia. She is known for initiating and overseeing the creation of the famous White House Rose Garden.

women. Her connection to Arthur? She was born during his term! The reverse of her coin has a design "representative of the suffrage movement."

For the most part, there were four issues of First Spouse coins per year. In a few cases, however, there were five issues; this occurred when a president had a second wife during his term in office. John Tyler (Letitia and Julia) and Woodrow Wilson (Ellen and Edith) both remarried during their presidential terms after their first spouse died.

In the case of Woodrow Wilson, Edith essentially played the role of a shadow president after her husband was incapacitated from a major stroke in 1919. According to an account on the Mint's website, "She chose which visitors he saw and what papers he read, though she insisted she never made a single decision on public affairs." Wilson died a few years after leaving the White House in 1921, but his widow lived on "until December 28, 1961, the anniversary of her husband's birthday." Edith Wilson has been described as the nation's first female president.

If you survey the First Spouse mintages across the series, you'll find that the mintage high-water mark came with the first year's issues. Mintages of the eight different possibilities ranged from 12,340 for the uncirculated Dolley Madison coin to 19,823 mint state examples of Thomas Jefferson's Liberty. After 2007, it was mostly downhill for the series.

What this means, I suspect, is that there was a lot of interest in the novelty of these coins but once the "bloom was off the rose," the people who ordered them were mostly the hard-core collectors who planned to assemble a complete set. There were some blips in the mintages, with coins of the Liberty series often having the greatest distribution in the years they were issued. In the later years of the series, Jackie Kennedy's coins had significantly larger mintages than most of the First Spouse coins beyond the 2007 issues.

As for low mintages, beginning in 2013, many of the uncirculated pieces had mintages below 2,000! If there's ever an upsurge of interest in this wonderful (in my opinion) bullion/commemorative series, many of these later pieces may increase dramatically in value because of their scarcity.

What about grading if you're interested in getting certified pieces? Grading is really not an issue because there's so little variability in the grades received from the major certification services (e.g., NGC and PCGS). Specifically, there's almost a 100 percent likelihood that a particular First Spouse coin will grade either MS (or PR) 69 or 70.

Unless it's a particularly scarce item, any coin grading less than the top two grades is likely to be sold for its bullion value. That's certainly what I did with a coin a friend of mine received that had been mishandled in filling his order. It received a grade of MS-63! Now that was a rarity of the highest order. Rare, but in this case not valuable.

EDITH WILSON

UNITED STATES OF AMERICA
E PLURIBUS UNUM • $10 • 1/2 OZ. • .9999 FINE GOLD

According to the U.S. Mint, Edith Wilson is often described as America's first woman president because of the important role she played after her husband's massive stroke in 1919, choosing which visitors he saw and what papers he read.

ELEANOR ROOSEVELT
IN GOD WE TRUST
LIBERTY 2014 W
32nd 1933-1945
UNITED STATES OF AMERICA
E PLURIBUS UNUM • $10 • 1/2 OZ. • .9999 FINE GOLD

Eleanor Roosevelt was a delegate to the United Nations, visited the homeless on the streets, worked in soup kitchens, and more. The reverse depicts Adlai Stevenson's quote of how "She would rather light a candle than curse the darkness, and her glow has warmed the world."

At the time I'm writing this, gold is priced at $1,562 an ounce, which means that each First Spouse coin has $781 intrinsic value. The least expensive examples that I found on eBay were selling (postpaid) for between about $820 and $850. That works out to between 5 percent and 9 percent over their bullion value.

Of course, there are many of the coins advertised for much larger amounts. In fact, when I had the items (over 1,000!) arranged in descending price order, the first thing that came up was the sale of a complete set of First Spouse coins, both mint state and proof, for $188,888.88, with an additional $250 for shipping. It's worth noting that this magnificent set has an intrinsic value of $118,712 at the present time. These were all certified by PCGS, by the way.

If you just want the proof coins, the second item that came up was a set of all the proofs, uncertified, with all packaging materials, for $60,000. Free shipping and free returns on this set.

But which First Spouse coins can you get for no more than 5 percent to 9 percent over their bullion values? Priced at $850 postpaid (all with free shipping), there's a 2011 Lucy Hayes coin graded PR-69 Ultra Cameo (UC) by NGC. The mintage of this piece was 3,868.

For $842.50, you can buy a First Strike 2009 Letitia Tyler, graded MS-69 by PCGS, with a mintage of 3,240. Or, what about a 2011 NGC-graded PR-69 UC Lucretia Garfield, with 3,653 minted, for $840? If you want a 20th century First Spouse, there's a 2015 Elizabeth Truman in proof for $837.50. This coin had a mintage of 2,747.

If you don't care which First Spouse you purchase and want to pay as little as possible, there were several dealers offering random years for about $820 apiece. If you are interested in the series as collectibles and haven't purchased any yet, it might be possible to request all different pieces if you buy several at a time.

But what about First Spouse issues with mintages below 2,000? The uncirculated version of 2015 Lady Bird Johnson, mintage of 1,927, was available for either $862.50 uncertified or $995 in PCGS MS-70. The best price I could find on a mint state 2016 Betty Ford (1,824 minted) was $999.99 with $25 shipping for an uncertified example. Similarly, I found a 2013 Edith Wilson coin (mintage 1,974) listed for $999.99 postpaid. The coin was an Early Release certified by NGC as MS-70.

From this small sample, it appears that you may be able to find even the First Spouse issues with the lowest mintages for no more than 30 percent over their bullion values.

Are there any bargains to be had in the First Spouse series? If you like U.S. Mint-issued half-ounce gold coins with interesting designs that sell for amounts close to their bullion values, then the answer is yes. Additionally, most of the mintages in the series are quite low, which means that there might be a numismatic play as well.

From what I can see, there's a lot to like in the First Spouse series. Pick up a few if you're interested in purchasing some U.S. gold with growth potential.

Silver and U.S. Coinage

By R.W. Julian

In 1652, Massachusetts began striking silver coins for public use.
(Images Courtesy of Heritage Auctions)

Regular United States silver coinage began in October 1794 with the silver dollar.
(Images Courtesy of Heritage Auctions)

BEGINNING IN the latter part of 2018, the value of silver and gold started to climb. Silver was often at or above the $17 per ounce mark while gold passed $1500, sometimes very strongly. These recent fluctuations mask the fact that, for decades, the value of silver greatly influenced American coinage.

Although regular silver coinage began at the Philadelphia Mint in October 1794, this metal had long played a key role in the American marketplace. As early as 1652, Massachusetts had produced silver coins from its mint in Boston but in the early 1680s, British authorities pressured them to close down this important source for coinage.

After the demise of the Massachusetts mint, colonists had to make do with a variety of foreign coins, primarily small Spanish silver struck at Mexico City, Lima, and Potosí. Some gold was used by large merchants but the average person made do with Spanish silver, primarily the one-half, one, and two reales pieces.

In 1775, the Revolutionary War began with the skirmishes at Lexington and Concord and within a short time the newly-formed Continental Congress had voted to issue paper currency to pay for the necessary troops and materiels. A note for $1, for example, was said to be worth a Spanish milled dollar (8 reales) but it was a rare citizen indeed in those days who got silver coins from the government in exchange for his paper money.

In real terms, of course, the Continental Congress was not all that naive since it had no real taxing power and depended upon the States to provide funding. The rapid depreciation of the paper currency in effect proved a tax; by 1783 the Confederation currency was virtually worthless, giving rise to the famous phrase "Not Worth a Continental."

In the mid-1780s an attempt was made to establish a national mint and coinage, but the government was so poverty-stricken that it proved a futile gesture. The coinage plans, which used silver as their basis, had been carefully worked out by a Virginia congressman named Thomas Jefferson.

In 1787, leaders from all States met to prepare a federal style constitution. The idea was to create a strong central government so that the economy, among other matters, would have a chance to prosper. Within a few months the Constitution had been adopted and the new government began operations in April 1789.

By early 1790, there was sufficient demand from the public for an American coinage that Congress asked Treasury Secretary Alexander Hamilton to submit a report on the subject; it was finished in January 1791. In March, that body reacted by passing a formal resolution asking that President Washington take the necessary steps to create a mint and coinage based on the Hamilton report.

The President attempted to carry out the request of Congress but when this proved difficult under existing legislation, he pointedly remarked to the legislators that a comprehensive law was needed. In late 1791, a Senate committee began writing the necessary draft bill for consideration.

In preparing their bill, the Senators paid very careful attention to the Hamilton report. The latter had recommended a bimetallic system with a fixed ratio between gold and silver coins. He reported that the current international ratio was roughly 15 to 1, which meant that 15 ounces of silver were worth one ounce of gold. Congress agreed and in April 1792 the basic Mint law was enacted.

Using the Spanish dollar as the basis, all other silver and gold denominations were created and given definitive weights. Silver was first struck in October 1794, followed by gold in July 1795. Until about 1799 the bimetallic system worked reasonably well, though gold coins never really went into the marketplace, their use being reserved for large transactions and foreign payments.

Collectors today think of the early U.S. silver coins being well-used in the marketplace but this was not quite true. Most of the small silver change was actually Spanish. The 2 reales was equivalent to the U.S. quarter dollar and so many of them were in daily use that very few quarters were made in the early days.

If the widespread use of Spanish silver

Quarter dollar coinage was erratic in the early years due to widespread public use of the Spanish 2-reales, which had the same value.

(Images Courtesy of Goldberg)

After 1804, the Mint concentrated on half dollars as the most important silver coin.

(Images Courtesy of Stack Bowers)

Half dime coinage resumed in July 1829.

(Images Courtesy of Goldberg)

seems odd to modern eyes, it was also true that the large issues of American gold coins after about 1800 were heavily exported, especially to Europe. The 15 to 1 ratio had shifted on the international money markets to 15.5 to 1, which undervalued gold and created an exodus of such coins.

Beginning in 1803, the coinage of half dollars was increased at the Philadelphia Mint but only part of this output was meant for the marketplace. Some of it was used in Indian treaty payments but large quantities were also stored in bank vaults along the East Coast, as backing for their paper currency. Half dollars went into daily use, however, as the Spanish equivalent (4 reales) was always in short supply.

At about the same time (1804) as the increased half dollar coinage, Mint Director Elias Boudinot stopped the coinage of silver dollars. Too many of the dollars were being exported to China for luxury goods, never to return.

From 1805 through 1807, there was a heavy coinage of quarter dollars. This was due to fewer of the Spanish 2-reales coins being imported from the West Indies and Mexico; however, in 1807 the tide turned and quarter dollar coinage was suspended until 1815.

From 1807 until after the War of 1812 ended in 1815, American silver coins used by the public consisted mostly of half dollars although some quarter dollars dated from 1805 through 1807 were seen on occasion. Dimes and half dimes were rarely encountered, especially after 1805 when half dimes ceased to be made.

The problem for American dimes and half dimes was that they did not fit into the Spanish system of coins. American coins have always been decimal but the Spanish silver was not and it was in widespread use, even on the frontier. Because of this, many items were priced at 6.25 cents (half-real) or 12.5 cents (1-real).

There are still echoes of the old Spanish system in our daily life. One of the common high school athletic yells is "Two bits, four bits, six bits, a dollar" which means "25 cents, 50 cents, 75 cents, a dollar." (Among the public in the 19th century, one silver real was often referred to as "one bit.")

In the late 1820s the situation began to change for the better. It is not clear at present whether the supply of small Spanish (or Mexican after 1821) silver had begun to diminish or simply that Americans wished to use their own coins in daily commerce. Whatever the reason, the Mint began to strike increased numbers of such coins that went into active use. The half dime was again struck beginning in 1829 and would not have been made if there had not been an increasing number of items priced at five cents.

By the early 1830s, it had dawned on Congress that changes were necessary to our monetary system. Well before 1834, American silver coinage was in full circulation but there was no United States gold to be seen. Everyone now knew that the legal ratio of 1792 (15 to 1) was no longer realistic.

In June 1834 Congress changed the ratio to 16.002 to 1. The weights of the gold coins were reduced, resulting in heavy coinages which remained in the United States. Treasury officials, however, were concerned that too much gold was flowing into this country and that it might drive the silver out. This resulted in a January 1837 law which altered the ratio to 15.998 to 1.

The January 1837 law also took the opportunity, long overdue, of changing the fineness of the gold and silver coins to an even 900/1000. (The silver, under the 1792 law, had been a clumsy .8924.) The weight of the silver dollar was reduced from 416 to 412.5 grains, though the amount of pure silver remained the same; smaller silver coins were proportional to the dollar.

In late 1836, the Mint began to reintroduce the silver dollar to active circulation. Heavier dollar coinage followed in 1840 but the pieces did not go into widespread

Silver dollar coinage resumed in 1836.

In 1853, arrows at the date marked a reduction in weight.

(Images Courtesy of Stack's Bowers)

Arrows were added at the date in 1873 to show a change in weight.

(Images Courtesy of Stack's Bowers)

use; rather they took the place of half dollars in bank reserves.

Between 1837 and 1849, true bimetallism operated in the United States for the first and last time. There was a ready supply of gold and silver bullion for coinage. Even the war with Mexico did not shake the currency system in effect for these years.

The Mexican War, however, had an unexpected result. The discoveries of gold in California beginning in 1848 meant that too much gold was being mined in terms of public needs. This created a demand for silver, especially in Europe, resulting in American silver coins being worth more than face value. Bullion dealers took advantage of this, resulting in the rapid disappearance of silver coins.

In 1851, Congress responded by creating a debased 3-cent silver coin; struck in great quantities, the "trime" stayed in circulation because of low intrinsic value. It was the first step in the abandonment of bimetallism.

In February 1853, Congress took the final step by lowering the weights of the minor silver coins. The silver dollar was not touched but it did not circulate anyway. The nation was effectively on the gold standard with minor silver struck strictly on government account. Arrows were placed at the dates of silver coins in 1853 to denote this change. In legal terms we now had a de jure bimetallic system but a de facto gold standard.

The 1853 law stipulated that minor silver coins (trime through half dollar) could only be paid out for gold, thus regulating the amount reaching the marketplace. San Francisco and New Orleans Mint officials adhered to the law but Mint Director James Ross Snowden at Philadelphia had other ideas.

Snowden thought the Mint too valuable an institution to be bound by the law and proceeded to pay out silver coins for silver bullion, reintroducing a limited form of bimetallism. This illegal act resulted in mass silver coinages.

By 1858, there were so many complaints about this flood of silver coins, that the Treasury finally ordered Snowden to obey the law; coinage quickly dropped to lower levels but the Civil War was just around the corner (1861) and this conflict would soon force further changes in the monetary system.

As happens in all major upheavals, the public soon hoards items of value, which in this case was the gold and silver coinage. By June 1862 (except on the West Coast), gold and silver had vanished from the marketplace to be replaced by paper money, some of it as low as 5-cents in value.

In 1865 and 1866, Congress replaced the 3- and 5-cent silver coins with pieces made of copper-nickel. The decision was made permanent in 1873 when these two silver denominations were abolished.

At the same time, however, when virtually no silver coins were circulating east of the Rockies, there was an increasing amount of silver being mined in the West. This resulted in heavy silver dollar coinage in 1859 and 1860. Depositors still had the right, under the 1853 law, to bring in their silver bullion in exchange for this denomination.

The problem of heavy silver mining remained and by the late 1860s the price of silver had begun to slip. The result was that East Coast bullion owners again brought their silver to the Philadelphia Mint to be

coined into dollars.

At the same time, the nation faced the problem of having been on a paper-money regime since 1862. In 1870, the Treasury decided that something had to be done and appointed John J. Knox to prepare a coinage bill that would help put gold and silver back into the marketplace.

The end result of Knox's work was the Mint Act of February 1873. Not only were some unnecessary denominations abolished but the silver dollar went as well. In place of the dollar Congress created the Trade dollar, meant to export our growing surplus of silver to the Orient.

A key element of currency reform was the appointment of Henry R. Linderman as mint director in April 1873. Linderman, under orders from President Grant, started putting silver coins into daily use throughout the East, a direct violation of Federal law; this law had been passed to safeguard the paper currency but now stood in the way of reform.

The bold gamble by the President worked and silver entered the marketplace at ever-increasing rates. In 1875, Congress repealed the legislation forbidding this practice.

In 1873, the Treasury chose to mark a weight increase on the silver coinage by placing arrows at the dates. Arrows in 1853 had marked the practical end of the partnership between silver and gold while the 1873 arrows marked the official end.

During the 1870s, due to the ever-declining value of silver, there was agitation for resuming silver dollar coinage. In early 1878, the "Silverites" in Congress were at last successful and the Bland Allison Act was passed. Coinage of Morgan dollars carried on at a strong pace since the government was forced to buy a considerable quantity of silver each month for coinage. The new dollars had unlimited legal tender but coinage was not free, being strictly on government account.

The last sustained effort by the silver forces came in 1890 when Congress passed the Sherman Silver Purchase Act. In addition to an increase in silver purchases, Treasury Notes were now issued that could be redeemed in silver or gold. Foreign bankers and investors became nervous and began to redeem their holdings in gold. A financial collapse of the American government was narrowly averted when President Grover Cleveland forced a repeal through Congress in 1893.

The 1896 presidential race between William Jennings Bryan and William McKinley ended in victory for the latter and the end of a dream for the Silverites. As an odd afterthought, in 1900 Congress passed a resolution which proclaimed that we were now on the gold standard. The United States, however, had actually been on the gold standard since 1853.

From 1900 through the mid-1960s silver coinage was struck as needed. In the late 1950s, however, silver began to recover some of its past glory and the officially fixed price of 92.5 cents per ounce was under pressure. The Treasury asked Congress to remove silver from the coinage. This was done in 1964 although coins dated 1964 were coined well into 1965. For political reasons the half dollar was allowed to keep a 40 percent silver alloy but this was phased out in 1970, leaving only the 'sandwich' coins.

A Fistful of Bargains: Finding Good Value in U.S. Silver

By Mark Benvenuto

This 1951 Franklin half dollar graded PR-67 Cameo by NGC realized $2,280 at the December 2019 U.S. Coins Signature Auction in Dallas, Texas.

(Images Courtesy of Heritage Auctions)

THERE'S NO doubt about it, folks love a bargain. It need not be coins. We all like doing some after-Christmas shopping, just to see what might be out there at half price, simply because it is one day after the holiday. But that love for a good buy is certainly heavily ingrained among us collectors also. There's a real feeling of pride when we land a good deal, something we know will become part of our collection for years to come.

When it comes to United States coins, several of the popular series are collected heavily enough that we might find the idea of grabbing a bargain to be something of a fantasy. Let's poke, prod, and tease some of the price lists for a moment or two, however, and see if there might just be a select good deal or two in the midst of things. Here, for our consideration, are five pieces of United States silver that may very well remain excellent bargains.

First, Proof Franklin Half Dollars

We're putting the Franklin half dollars up front because this short-lived set of 50-cent pieces is very often overlooked when the buzz, glare, and spotlight is put on their siblings (the Walking Liberty halves) or at least on one or two in some amazing condition that has gone up for auction. There are proof Franklin halves from 1950 up through 1963, although those in the first few years are far less common than those at the tail end. For example, the 1950 Franklin halves saw a proof mintage of 51,386 coins, pretty small by today's standard. Using the "Coin Market" in this issue, the price tag for one in a truly fantastic grade (like PF-67) can be too high for many of us. But the 1954, which saw a total of 233,300 proofs, only runs about $150 in that same high grade. There's no doubt about this being a beautiful coin at an equally beautiful price. Franklin halves that are more recent will cost even less.

Second, Morgan Silver Dollars

The Morgan dollar series is rather a hefty one, considering that it only ran from 1878 to 1904, then again for one year in 1921. But these big guys came from quite a few different mints, and have numerous varieties slated within the issues, which adds up to a series that can be considered quite the challenge if we want a full set. One way to look at all these dollars is to do a price comparison using any of the major listings, like those in the back of *Coins*, to see just where the price dips are. Five that are pretty quickly apparent are a trio from the West Coast facility, the 1879-S, the 1880-S, and the 1881-S, and a pair from the Big Easy, the 1883-O, and the1884-O. Admittedly, all are high mintage coins, with even the lowest of the five (the 1883-O) being close to 9 million strong. An official mintage tally that is up at that level does not always mean, however, that there is also a high number that have remained in the various grades of mint state.

Keeping with our idea of trying to get some bargain price for any of the coins we're examining, we should keep in mind that even though this quintet of Morgans are about as common as any coin in the series can get, the MS-65 grade remains one that is considered excellent for any series. And the amazing part here is that each one is only about $150 in that grade. Will these ever jump up in value? Probably not. But each will be a tremendous looking coin for a rather small outlay. And these are simply five that happen to be at the front end of the series. It's a good bet that there are more.

Third, MS-64 Peace Dollars

If we are going to look at Morgan dollars, we should pay a visit to the Peace dollars also. In many venues, taking a step down often comes with plenty of negatives. But when we move from MS-65 to MS-64 coins within the Peace dollar series, there's no real drop in the look and feel of the coins but the drop in price is eye-opening. The 1922, the 1923, the 1924,

and the 1925 are all very common dates. The 1922 is the highest mintage of any silver dollar ever until the Ike dollars – yet because of this they remain attractively priced, especially in the MS-64 grade. Each rings in at less than $100, with a couple of them being only half the price of their MS-65 siblings.

Fourth, Select Capped Bust Halves

Adding a Capped Bust half or two might seem like something of an odd choice for a coin or coin series that can be called a bargain. After all, the Capped Bust series of half dollars is old enough that almost no one collects the entire thing by date, and even fewer people have the means to collect it by variety. But that's precisely the reason to look here—no one else is.

The latter portion of the Capped Bust halves, basically from 1824-1836, saw a wealth of varieties, but today sees a steady price for the AU-50 coins. Yes, we'll admit it right away, we have moved away from specimens in the mint state zone but only because we are focusing on bargains. Any Capped Bust half in even the lowest of the mint state grades is going to cost quite a bit. But perhaps since the series is not collected nearly as much by date, there are plenty in this stretch of time which ring in at about $300 as AU-50 coins. That's actually a rather low price for a coin with so much history to it.

Fifth, Two Classic Commemorative Halves

We'll fill out our fistful of silver with a couple of ideas from a series that went through some hot times a few decades back, but has become rather dormant today. For those among us who have been collecting since the 1980s, there may be memories of the greater series of classic commemoratives, which is largely half dollars, going for prices that seemed absurdly high. Somebody must have taken a loss between then and now, because the entire series has settled down considerably, and some have become downright affordable.

The Pilgrim Tercentenary is one of the classic commems that often gets lost in the crowd. Some critics claim the design is nothing special, or even ugly, while others don't see the theme as anything all that special. But in 1920 there were 152,112 of these half dollars produced, and today one costs about $120 in a grade like MS-64. Curiously, in 1921 the coin was re-issued

A 1921 MS-64 Peace dollar. The matte and satin finish proof strikings of 1921 Peace dollars are among the most controversial of all dollars ever produced, according to Heritage.

A 1921 Pilgrim Tercentenary half dollar graded MS-67+ by PCGS.

(Images Courtesy of Heritage Auctions)

but only to the tune of 20,053 pieces. Yet the MS-64 version of this latter date only runs about $240 in that same MS-64 grade. Both versions of this oft-forgotten half qualify as very affordable.

The Lexington-Concord Sesquicentennial is another of the classic commemorative half dollars we'll gaze at, for a couple of reasons—and not just because it lets us actually use the word "sesquicentennial" in polite conversation. First, this half dollar sports the very famous statue of the Minute Man, designed and executed by Daniel Chester

French. And second, while its mintage of 162,013 is not considered low by the standards of the commemorative series, it's not all that high either. Issued in 1925, before the real glut of commemorative coins hit in the 1930s, right now something like $155 will land us an example in an MS-64 grade. That's not too bad for an example of that famous minute man statue.

Going Farther?

Are there other bargains lurking within the varied series of U.S. silver coins? Oh, of course, there must be. What we have looked at here is hopefully nothing more than the tip of that proverbial iceberg. But in taking this glance, we have found that there are some good buys hiding in plain sight, as it were, and a few more obscure pieces which are still quite affordable. We have avoided gold and some of the more obvious series of United States silver, simply because the obvious is emphatically not the place to look when bargain hunting. For anyone willing to whip out one of the standard reference books and the price guide from a recent issue of *Coins* to do a little sleuthing, however, well good luck and enjoy the thrill of the hunt!

The 1925 Lexington-Concord half dollar. This particular example is graded MS-67 by PCGS. There is only one certified numerically finer, according to Heritage.

Grading Standards

Grading Your Coins

Careful consideration must be given to the condition of a coin before arriving at its value, since a minor difference in grading can mean a substantial difference in price. There are several factors to keep in mind when attributing varying grades of preservation. Determining the condition of a coin is both an exact science and a subjective judgment call. Complete agreement on the exact qualities that constitute a grade of condition does not always occur between two individuals.

The following chart is a consensus based on the 10 most frequently encountered coins commanding premium values in circulated condition (illustrations not actual size). The descriptive grades can be applied to other issues. Qualities described are based on the standards developed and adopted by the American Numismatic Association.

MS-65 (uncirculated)—MS stands for mint state, which refers to a coin that has never been placed in circulation. An MS-65 is a superior mint-state example. It will be sharply struck with full mint luster. There will be no distracting marks in the field or on the raised areas of the design. The coin may be brilliant or naturally toned, but it must have superior "eye appeal" to qualify as an MS-65.

MS-64 (uncirculated)—May have light scattered contact marks. Luster will be at least average.

MS-63 (uncirculated)—May have some distracting marks in prime focal areas with a

few scattered hairlines. Coins in this grade will generally have a pleasing appearance.

MS-60 (uncirculated)—The typical quality encountered in coins struck for circulation. No wear will be evident, but a small number of bag marks, nicks, or other abrasions will be present. Surfaces could be dull or spotted.

AU-50 (about uncirculated)—Just a slight amount of wear from brief exposure to circulation or light rubbing from mishandling may be found on the elevated design areas. Those imperfections may appear as scratches or dull spots, along with bag marks or edge nicks. At least half of the original mint luster will usually be present.

EF-40 (extremely fine)—Coins must show only slight evidence of wear on the highest points of the design, particularly in the hair lines of the portrait on the obverse and the eagle's feathers and wreath found on most U.S. coins. A trace of mint luster may show in protected areas of the coin's surface.

VF-20 (very fine)—Coins reflect noticeable wear at the fine points in the design, though they may remain sharp overall. Although the details will be slightly smoothed, all lettering and major features must remain sharp.

Indian cent: All letters in "LIBERTY" complete but worn; headdress shows considerable flatness, with flat spots on tips of feathers.

Lincoln cent: Hair, cheek, jaw and bowtie details will be worn but clearly separated, and wheat stalks on the reverse will be full, with no weak spots.

Buffalo nickel: High spots on hair braid and cheek will be flat but show more detail, and a full horn will remain on the buffalo.

Jefferson nickel: Well over half of the major hair detail will remain, and the pillars on Monticello will remain well defined, with triangular roof partially visible.

Mercury dime: Hair braid will show some detail, and three-quarters of the details will remain in the feathers. The two diagonal bands on the fasces will show completely, but be worn smooth at the middle, with the vertical lines sharp.

Standing Liberty quarter: Rounded contour of Liberty's right leg will be flattened, as will high point of shield.

Walking Liberty half dollar: All lines of the skirt will show but be worn on high points, and over half of the feathers will show on eagle.

Morgan Dollar

Barber Coins

Morgan dollar: Two-thirds of hairlines from forehead to ear must show, and ear will be well defined, while feathers on eagle's breast may be worn smooth.

Barber coins: All seven letters of "LIBERTY" on headband must stand out sharply, while head wreath will be well outlined top to bottom.

F-12 (fine)—This is the most widely collected condition. Coins show evidence of moderate to considerable but generally even wear on all high points, though all elements of the design and lettering remain bold. Where "LIBERTY" appears on the headband, it must be fully visible. The rim must be fully raised and sharp on 20th-century coins.

VG-8 (very good)—Coins show considerable wear, with most of the points of detail worn nearly smooth. At least three letters must show where "LIBERTY" appears in a headband. On 20th-century coinage, the rim is starting to merge with the lettering.

G-4 (good)—In this condition, only the basic design detail remains distinguishable in outline form, with all points of detail being worn smooth. "LIBERTY" has disappeared, and rims are nearly merging with the lettering.

About good or fair—A coin identifiable by date and mint but otherwise badly worn, with only parts of the lettering showing. Such coins are of value to collectors only as space fillers and command a significant premium only in cases of extreme scarcity.

Proof—Created as collector coins, proof specimens are struck on specially selected planchets with highly polished dies and generally display a mirrorlike finish, sometimes featuring frosted highlight areas. All individual proof valuations listed in this guide are for superb Proof-65 specimens.

Prooflike and deep-mirror prooflike—These terms describe the degree of reflectiveness and cameo contrast on well-struck Morgan dollars. A DMPL coin may appear to be a proof at first glance, and a prooflike specimen has a lesser (but still considerable) degree of flash. Bag marks are more noticeable on PL and DMPL Morgans. Some common dates are scarce in this condition.

Collectors who want to study coin grading in greater detail should examine the *Official ANA Grading Standards for United States Coins*, which provides photos of coins in grades from about good to mint state. *Photograde* by James F. Ruddy is a handy reference for grading circulated coins.

Market Watch

Year in Review: Collector Market Stable

by Richard Giedroyc

There were six U.S. coins that sold for in excess of $1 million each during 2019. Five of them were sold by auction. The other was through a verifiable direct sale. The truly scarce to rare segment of the coin market is healthy and thriving–especially through auction sales. The balance of the market is active, but hasn't been as fortunate from a financial point of view.

The Barber, Walking Liberty and Franklin half dollars, especially when certified to be in unusually superior condition, have appreciated noticeably. Most other areas are at best in narrow trading ranges, but price appreciation doesn't appear to be on the horizon. It may come as a surprise, but even the ever-popular Morgan silver dollar sector of the market is continuing to see more minus than plus signs. While the spot price of gold rose about 18 percent during 2019, the U.S. Mint sold 38 percent less gold American Eagle coins than were sold one year earlier.

What all this means is that the collector market for coins is stable, but not increasing in popularity. The investor remains on the sidelines in all areas except for very rare coins. With the stock market continuing to rise, inflation under control and the U.S. dollar strong, coins remain in the hands of the dedicated collector. Without expansion of this market, it can be anticipated to remain stable but with little growth in such a scenario.

Values listed in Coin Market are based on coins graded in accordance with the American Numismatic Association's Official ANA Grading Standards for United States Coins book and those of the leading third-party grading services. Values are neither offers to buy nor sell by Numismatic News and are listed as a reference only. Dealer buying prices are 10 to 40 percent below listed retail prices. Prices are for nice original BU or proof pieces with box and papers. Coins that are not fresh or are mishandled are only worth melt value with few exceptions. MS/PF69-70

1964-2019 KENNEDY HALF DOLLAR 104-COIN SET!

Bicentennial Reverse of 1976

Presidential Seal

1964-2019 BRILLIANT UNCIRCULATED KENNEDY HALF DOLLAR SET: **$395.**

The iconic JFK Half Dollar was rushed into production only months after his tragic death. The obverse shows the Presidents' profile, and features the Presidential Seal on the reverse. Housed in a new Dansco Brand Deluxe album with sliding windows for both sides viewing. All 8 1964-70 Silver coins and the 2, 1776-1976 dual dated coins are included in this 104-Coin Set!

CLASSIC LARGE-SIZE US CURRENCY!

Three Iconic Notes from America's Past!

1907 $5 "Woodchopper" US Note
President Andrew Jackson cameo and a pioneer family at their cabin

VF $395. ~ XF $595. ~ Unc. $995.

1923 $1 "Horse blanket" Silver Certificate
Featuring President George Washington and nicknamed "Horse blanket" for its large size

XF $119. ~ Unc. $195.

1917 $2 "Jefferson" US Note
Featuring President Thomas Jefferson and the US Capitol after the Civil War

VF $225. ~ AU $349. ~ Unc. $795.

1864 CONFEDERATE STATES OF AMERICA $500!

Over 150 Years Old!

Only note to feature both Gen. Stonewall Jackson and C.S.A. flag !

Well Circulated VG/Fine **$695.**
Medium Grade VF/XF **$895.**

This genuine 150+ year old Confederate $500 features the famous portrait of General Stonewall Jackson and the CSA Seal in front of the rebel battle flag. Pink overprint was innovative for its time! The reverse side is blank, due to the printing plates being confiscated by Union ships!

Available in two different condition grades for every budget!

GENUINE U.S. ERROR CURRENCY!

(Sample Image)

The Green Treasury Seal, the Black District Seal, and both serial numbers on this Federal Reserve Note $1 were accidentally printed upside down! A rare error which seldom escapes the Bureau of Engraving and Printing inspection process!

Inverted Overprint $1 Error!

$595.

OVERSTOCKED!

All 4 NGC Certified Proof 2007 Presidential Dollars!

This group of the first 4 Presidential Dollars from 2007 features George Washington, John Adams, Thomas Jefferson and James Madison. Each proof strike is in "Deep Cameo" contrast and graded Proof-69 Ultra Cameo by NGC! The reverse side of each dollar features the iconic Statue of Liberty!

(Reverse)

1 Set of All 4: $39.

2 Sets of All 4: $69.
